

**Announcing A New and Invaluable Reference
Discussing the Methodology and Application of**

Distance Education

As we enter the new millenium, the rapid development of telecommunications technologies has resulted in increasing interest in and experimentation with distance education applications for teacher education in special education. The critical shortages of appropriately qualified and adequately trained professional personnel to staff special education and related services positions in the nation's schools represent a major challenge for the field. In an effort to address these shortages, which are especially severe in rural areas and in low incidence disabilities, a number of preparation programs have looked to distance education technologies to increase access to preservice and inservice training. In this book, you will share the experiences of leaders in this new and exciting field. Whether you seek to develop a new program or are searching for ways to improve an existing one, this book will provide invaluable insights to the design and delivery of distance education programs.

The individuals and programs presented in this collection are widely acknowledged as innovators in the development and delivery of distance education in teacher education and special education. They strive to remain on the cutting edge of development and delivery and to keep themselves well informed on key issues and trends. Authors and programs have been included because they represent *current best practice* and also display the range and uniqueness of technologies currently used for distance education in the preparation of professional personnel. 186 pages, 7"x 10" perfect bound.
